

Managed Security Services Premier

Let us manage your first line of defense.

Unified Threat Management (UTM) devices integrate multiple network security technologies into a single hardware appliance. Through their advanced technology, multiple layers of defense, and seamless, end-to-end coverage, UTM devices provide vigilant protection against network security threats. However, configuring, managing and monitoring these devices takes considerable time, money and expertise, which puts undue strain on the administrators and engineers tasked with the responsibility.

Leverage Our Expertise

SilverSky' Managed Security Services Premier bundle enables organizations to significantly reduce the costs and complexity of managing their security devices. We monitor these devices on your behalf 24x7, handle all configurations and updates, and immediately notify your team of any potential issues. In addition, taking advantage of our own Threat Intelligence and additional intelligence gleaned from attacks on our extensive client base, we can pro-actively update devices in response to security incidents or known threats, i.e. by updating proxy white or black lists or deploying IPS signatures. Our advanced reporting ensures that you always have real-time insight into your network security posture. SilverSky also leverages our extensive compliance expertise to reduce the costs and headaches associated with meeting regulatory compliance.

The MSS Premier bundle includes Firewall, IDS/IPS, WCF, Gateway AV and VPN Remote User Access. We offer these services on an a-la-carte basis as well.

Managed Firewall

- Our security analysts handle tedious updates, configurations, and patches, empowering your IT team to focus on your core business.
- 24x7 monitoring from our SSAE 16 Type II audited Security Operations Centers (SOCs).
- Our online portal provides comprehensive reports on all firewall activity and makes compliance easy with out-of-the-box reports.
- Protect your network from malicious attacks without sacrificing network uptime, which is critical in keeping business operations running smoothly.

Intrusion Detection and Prevention (IDS/IPS)

- We handle complex updates and configurations and monitor your network for any suspicious activity.
- Our solution monitors complex traffic patterns to prevent sophisticated threats that cannot be detected with firewalls alone.
- Our solution detects and prevents internal attacks, which are an increasing problem as more employees are using personal devices that can infect your entire network.

Web Content Filtering

- Block Non-business related web traffic or web access that violates your Internet usage policy
- Block web sites known to be infected with viruses or spyware
- Block web sites that create excess bandwidth utilization (Including web sites with streaming media, Internet radio and peer-to-peer sharing) and reduce productivity (Including web sites with advertisements, message boards, instant messaging and free downloads)

Gateway Antivirus

- Advanced signature detection provides multi-layered protection against malware
- Stops all malicious traffic based on the latest malicious code signatures coming through web traffic, email traffic and file transfer traffic.
- Scanning of HTTP, SMTP and FTP traffic for viruses

The Trusted Security Experts

- More than 628 million security events processed per day
- More than 13,000 alerts triaged per day
- + 500GB added to our big data analytics platform per day
- + 84 security analysts in 4 global SOCs—without sacrificing network performance.

Managed VPN Remote User Access

- Connect remote users to the corporate network while providing the security protection of a private network –without sacrificing network performance.
- Our solution provides routing, encryption, authentication, and data integrity for secure connectivity across managed IP networks and the Internet.
- All data is decrypted when passing through our infrastructure to ensure that no viruses or other malicious threats enter your network through the VPN tunnel.

Key Benefits of SilverSky Managed Security Services

BENEFITS	DESCRIPTION
Reduce costs and complexity of device management	Our security analysts are experts at handling complex upgrades, configurations, and software patches. This enables you to reduce costs and complexity and empower your IT team to focus on your core business.
Reduce costs and complexity of meeting compliance	<ul style="list-style-type: none">• Provides customers with the industry's most up-to-date protection from today's more sophisticated threats, including zero-day attacks and advanced persistent threats (APTs).• Applies advanced techniques to detect and prevent attacks, even without signatures.• Provides protection at click time by rewriting URLs.
Reduce the complexity of working with multiple providers	SilverSky offers a comprehensive portfolio of network security products – you'll benefit from having just one contract, one contact for service and support, and one user portal.
Advanced reporting capabilities	SilverSky offers a comprehensive portfolio of network security products – you'll benefit from having just one contract, one contact for service and support, and one user portal.
Advanced reporting capabilities	Reduce risk exposure with anti-virus, anti-spyware, and anti-spam technology to block malicious software and spam at the gateway. Our message hygiene engines provide comprehensive protection.
Choose the approach that's right for you	We offer the flexibility to choose a security package that best meets the needs of your organization.
