

Managed Unified Threat Management

Best-of-breed unified threat management coupled with the expertise to ensure optimal performance

As companies continue to grow, so does their network perimeter. With this growth comes more exposure to cybersecurity threats and it's critical to have Unified Threat Management (UTM) systems in place along with the resources to manage them.

UTM provides simplified security by combining multiple security features and services into a single device.

UTM includes functions such as anti-virus, anti-spam, content filtering, intrusion detection, and web filtering.

For small and mid-sized businesses managing these systems can be expensive and time-consuming. But not doing it opens the company up to greater consequences in the event of a breach, which can lead to compliance fines and penalties, business interruption and reputational loss.

Benefits of **SilverSky** Managed UTM

Analyzes complex network traffic in real-time and proactively blocks malicious traffic and sophisticated attacks that cannot be prevented with traditional firewalls alone

Threat Intelligence is used to keep detection capabilities up to date and in line with the latest threats

Devices are configured for optimal security and updated based on real security threats to the organization

Every change is triaged by eye and appropriate response activities and advice identified

The response teams update UTM devices with mitigating or remediation activities, in line with customer business processes

The **SilverSky** Solution

Managed Anti-Virus

Signature-based protection with advanced heuristic checks stops viruses in their tracks

Managed Firewall

Firewall operation, administration, monitoring, maintenance, patching and updates reduces cost and complexity and lets your team focus on core business activities

Managed Intrusion Detection Prevention System

Configuration, policy tuning, signature updates and monitoring to ensure your perimeter and the assets inside it stay safe

Managed Application Firewall

Protects web-based applications from attack by monitoring input, output and access attempts and blocking any malicious activity

Managed Web Content Filtering

Concise, granular control of internet usage with malicious content blocking capabilities and user-based policies

Trusted Cybersecurity for an Uncertain World

SilverSky is a comprehensive suite of technology and services that brings simplicity to your compliance and cybersecurity program.

By tirelessly safeguarding your most important data, SilverSky enables growth-minded organizations to pursue their business ambitions without security worry.
