SilverSky Managed Endpoint Detection and Response

Unifies prevention, detection, and response in a single purpose-built agent powered by machine learning and automation

Endpoints with connectivity to corporate networks have increased exponentially over the past few years as companies support digital transformation and mobile workstyles. These endpoints, which are a combination of corporate and employee-owned devices, can make companies more vulnerable to cybersecurity attacks while providing little to no visibility for security teams to detect a compromise.

SilverSky has partnered with SentinelOne to provide a single autonomous agent combining End Point Protection (EPP) and Active End Point Detection and Response (EDR). The solution is offered in two tiers for customized requirements.

SilverSky Managed EDR has all the endpoint security essentials, including prevention, detection, and response, and adds desired security suite features, like device control and endpoint firewall control. It also includes full remote shell execution to ease IT overhead and provide uncharacteristic levels of granular control for managing endpoints.

SilverSky Managed EDR unifies prevention, detection, and response in a single purpose-built agent powered by machine learning and automation. It provides prevention and detection of attacks across all major vectors, rapid elimination of threats with fully automated, policy-driven response capabilities, and complete visibility into the endpoint environment with full-context, real-time forensics.

SilverSky Managed EDR

Made for every organization that wants top-notch protection without the hassle of complex management, or the need for highly skilled security analysts. SilverSky EDR consolidates attack prevention, detection, response, and recovery into a single agent that protects Windows, Mac, and Linux.

SilverSky Managed EDR features include:

- SilverSky Endpoint Prevention (EPP) to stop a wide range of malware, Trojans, hacking tools, and ransomware before they start
- SilverSky Managed EDR for Detection & Response works in real-time with or without cloud connectivity. It detects highly sophisticated malware, memory exploits, script misuse, and other fileless attacks as they attempt to do damage. SilverSky EDR responds at machine speed to autonomously contain damage
- SilverSky Managed EDR Recovery gets users up and running in minutes and includes 100% remediation and rollback for Microsoft Windows
- Device Control for policy-based control of all USB device peripherals
- Firewall Control for policy-based control of network connectivity to and from assets, including location-awareness
- In addition to application inventory, Vulnerability Management provides insight into third-party apps that have known vulnerabilities mapped to the MITRE CVE database
- Full Remote Shell capability for direct endpoint access by incident responders and forensics personnel

Features

		SilverSky Managed EDR
Endpoint Protection	Static AI	X
	Behavioral AI	X
	Documents, Scripts	X
	Fileless, Exploits	X
	Lateral Movement	X
Response	Remediation and Rollback	X
	Network Quarantine	X
	Full Remote Shell	X
Active EDR		Basic
Suite Features	Device Control	X
	Firewall Control	X
	Vulnerability Management	X
