

# Managed extended Detection & Response

Secure your business with simple, affordable enterprise-grade protection

Risk is everywhere in your modern business environment. But we've got you covered.

In our always-on complex business world, key business assets can be on-or off-premise, anywhere in the world – and so is risk. You need to protect the way you do business today but common cybersecurity challenges can be barriers to your success:

- Finding security resources in the midst of a talent shortage
- Managing multiple non-integrated point solutions
- Reacting to the right alerts in a sea of data
- Being able to sleep at night

**SilverSky Managed extended Detection and Response (MxDR)** helps you eliminate the barriers to better security. We ingest security data from across your organization, on-premise or cloud, analyse for suspicious activity, and respond to threats following custom playbooks aligned to your business. SilverSky MxDR is delivered at a predictable, affordable cost. We become an extension of your security team, protecting your business around the clock.

Realtime monitoring, alerting and response 24/7/365

-  On-premise legacy systems
-  Network security
-  Email
-  Perimeter Devices
