Enhanced Cybersecurity

Microsoft 365 E5, combined with SilverSky management of your M365 environment and advanced email and phishing protections, offers the Complete Package advanced threat detection and response capabilities. This powerful trio ensures that organizations are well-protected against cyber threats, with real-time alerts and automatic remediation actions to mitigate risks promptly.

Maximize your Microsoft E5 investment with SilverSky expertise

- Microsoft Defender XDR – Protect your organization against attacks.
- Microsoft Defender for Endpoint – A unified endpoint security platform for preventative protection, post-breach detection, automated investigation, and automated/manual response.
- Microsoft Defender for Cloud Apps – View apps used in your organization, identify and combat cyber threats, and monitor and control data travel in real-time.
- Microsoft Defender for Identity – Use a cloud-based solution to protect your organization’s identities.

Build Protection and Scale

E5 license components designed to enhance productivity, collaboration, and security:

- **Advanced Security:** comprehensive endpoint protection, safeguarding identities, secures sensitive data and advanced identity and access management.
- **Compliance and Information Protection:** manage legal and regulatory requirements by automating data classification, retention, and deletion processes.
- **Analytics and Insights:** Power BI Pro enables users to visualize and analyze data to derive actionable insights and drill into personal productivity insights with MyAnalytics.
- **Communication and Collaboration:** Teams, Microsoft Stream, Yammer and integration of voice/ phone/ audio conferencing

Increased Employee Productivity

The seamless integration of Microsoft E5 with Managed Defender M365, SilverSky EPS, and Business Email Compromise protection allows employees to work efficiently within a unified platform. This simplifies workflows and reduces the need to switch between multiple applications, leading to a more streamlined and productive work environment.

Scalable and Flexible Solution

Microsoft E5, combined with SilverSky EPS and Managed Defender M365, is a scalable solution that can grow with your organization. As your business needs change, additional features and capabilities can be easily added to the existing setup. This ensures that the solution remains relevant and effective, regardless of the organization's size or industry.

24/7 Management & Monitoring

We provide organizations with expert support and maintenance for their Microsoft E5 environment. This includes configuration, regular updates, security patches, and proactive monitoring to ensure that the system is always running smoothly and securely. Manage your Intune mobile device protection as easily as your network and cloud resources.

Managed Modern Work significantly reduces the IT burden on internal teams. This allows IT staff to focus on strategic initiatives and innovation rather than routine maintenance and troubleshooting. As a result, organizations can achieve greater efficiency and effectiveness in their IT operations.

Business Email Compromise (BEC) is an email cybercrime attack where a malicious actor targets an organization by compromising legitimate business email accounts, usually through social engineering or phishing scams, to manipulate the organization into transferring funds or sensitive information to the attacker. These attacks are often sophisticated and involve thorough planning and research into the targeted organization's operations and key personnel. BEC can lead to significant financial loss, data breaches, and damage to an organization's reputation. Robust email protections, especially for critical employees and executives, are essential to safeguard against such threats.
