Discover the power of Microsoft 365 Business Standard, your key to productivity and security for your business. When combined with SilverSky Email Protection Services and business email compromise, this dynamic solution offers a suite of applications and services tailored to modern businesses' diverse needs while providing 24/7 protection from cyber threats.

Core Features

Office Applications

Empower your team with the latest versions of Microsoft Office applications like Word, Excel, PowerPoint, and Outlook. Available both online and offline, these tools ensure seamless work, whether you're connected to the internet or not.

Collaborative Tools

Boost teamwork with powerful tools like Teams, SharePoint, and OneDrive for Business. With Teams, enjoy real-time communication and collaboration through chat, video conferencing, and file sharing. With SharePoint, managing documents enhances team collaboration, and OneDrive for Business securely stores and shares files.

Email and Calendar

Experience business-class email hosting with a 50GB mailbox per user and custom domains, all through Outlook. Stay organized and connected with Outlook's advanced email, calendar, and contacts management tools.

Email Security and Compliance

Protect your business communications with SilverSky Email Protection Services (EPS). Safeguard against threats like malware, ransomware, and social engineering tactics while ensuring business continuity and regulatory compliance.

Security and Compliance

Prioritize security with M365 Business Standard's features, including data loss prevention, encryption, and advanced threat protection. Meet regulatory requirements and protect customer data with comprehensive compliance solutions. Entra ID Premium protection offers Identity security and conditional access protections for your accounts and corporate data.

Benefits

Increased Productivity

Enable your employees to work more efficiently with access to powerful tools. Seamless integration within a single platform reduces the need for switching between multiple applications, streamlining workflows and boosting productivity.

Enhanced Collaboration

Foster better communication and teamwork with collaborative tools that allow real-time co-authoring, shared calendars, and instant messaging. These tools enable effective collaboration regardless of location.

Scalability and Flexibility

With M365 Business Standard's scalable solution, you can easily adapt to your business's changing needs and add additional features and capabilities to keep pace with your business's ambitions.

Increased Security

Leverages global threat intelligence capabilities to ensure email detection remains relevant with the changing threat landscape. Industry policy packs satisfy regulatory compliance.

24/7 Support

SilverSky has over 20 years of Microsoft expertise, and your SilverSky team will help configure, implement, and tune your services and provide support for the Microsoft M365 service suite.

Business Email Compromise (BEC) is an email cybercrime attack where a malicious actor targets an organization by compromising legitimate business email accounts, usually through social engineering or phishing scams, to manipulate the organization into transferring funds or sensitive information to the attacker. These attacks are often sophisticated and involve thorough planning and research into the targeted organization's operations and key personnel. BEC can lead to significant financial loss, data breaches, and damage to an organization's reputation. Robust email protections, especially for critical employees and executives, are essential to safeguard against such threats.
